

Torts: A Problem-Based Approach (Problem Based Learning)

Torts: A Problem-Based Approach introduces the subject of tort law to undergraduate and GDL/CPE conversion students undertaking compulsory modules in their first or second year of study in a practical and realistic manner, bringing this fluid and at times complex area of law to life. All the key elements of study are included and dealt with in a logical sequence, closely following the typical arrangement of topics in an undergraduate module. Each chapter contains real-life scenarios and case studies which are interwoven throughout to illustrate clearly how the law can be applied and where the potential pitfalls and challenges may lie. In support of this the text is fresh and clear, presented in readily understandable sections and summarised regularly to ensure that the key points are at hand. To offer support in assessments there are sample essay and examination questions and opportunities to test your knowledge, with sample answers supplied online. Excellent as a companion throughout the course, this book comes into its own when preparing for seminars and studying in smaller groups when concepts can be discussed and considered in their practical context. Never sacrificing depth of analysis nor accessibility, Torts: A Problem-Based Approach provides the ideal guide to the law of tort. A comprehensive selection of online materials includes MCQs, specimen answers to exam questions, additional reading/research references, mooting scenarios, self test questions, and a regularly updated case digest to enhance the interactive problem-based learning approach.
