

# The Law of Health Information Technology

This important road map to health information technology (HIT) and its challenges addresses an increasingly important facet of the healthcare landscape. The ever-evolving world of HIT requires a new way of planning for subjects as disparate as delivery of healthcare, retention of records for standard business reasons, and preparation for litigation. Successful HIT projects will require coordination between four critical constituencies: medical, business, technical, and legal. Both federal and state governments continue to address these new challenges by passing various regulations concerning privacy, security, copyright infringement, as well as marketing and advertising rules.
