

## The Yale Near Death Experiments: This is all fiction, really.

The year is 1985, and Harriet Wong M.D. is a young attractive -read sexy- Yale physician who just wants to get through her training, open up a private practice and find a good husband to enjoy life. Unfortunately for her, she discovers, by chance, that The University Hospital has used her father in near death experiments, and she thought he was dead, really dead. In the multimillion dollar medical world, curiosity can be deadly. This is a story of one woman's struggle to save her father and herself, from overpowering forces. This is a medical mystery of things that could happen or perhaps already have. This is all fiction, really.
