

# Developmental Visual Dysfunction: Models for Assessment and Management

A transdisciplinary team that communicates effectively is essential to the successful evaluation and treatment of a child who is multiply handicapped and has a visual dysfunction. In her comprehensive, easy-to-follow manual, Rhoda Priest Erhardt, M.S., OTR, FAOTA, gives concrete examples of transdisciplinary management of the child, thereby accomplishing what many authors have failed to do in a whole series of books. The transdisciplinary team, which aims for a unified, holistic view of the child, allows for an eclectic approach to vision problems that pervade all aspects of life function. This 200-page book presents four theoretical models and three illustrative case studies in an appropriate sequence for the learning process. The first three models, medical, educational, and developmental, lead to assessment and management of the child's environment. The fourth model is the functional, which comprises visual components of daily living as well as assessment of the environment. Three children's case studies—on Joseph, Melinda, and Nathan—illustrate theoretical approaches, assessment procedures, and management programs. Each child is comprehensively evaluated and analyzed in a transdisciplinary fashion. For evaluating and recording development, Mrs. Erhardt has provided the Erhardt Developmental Visual Assessment (EVDA), which also is available separately, and a new EVDA short form. New! The book now includes a CD-Rom with the Erhardt Developmental Vision Assessment (EDVA) for you to print in booklet or letter sized format as often as you wish for clinical and educational use. In a logical progression, she sets realistic goals and follows with treatment programs to meet these goals, which are real and necessary life-work skills that when met will help each child function better. Mrs. Erhardt anticipates

and answers questions of therapists and team members about each child's visual deficits. Additionally, she has included a glossary of terms to facilitate communication among professionals from different disciplines who use different language or have different meanings for similar words.
